INTRODUCTION.

The Ardennes Campaign Simulation Data Base (ACSDB) is actually composed of eight separate data bases, each of which has one or more fields in common with one or more other data bases. The data bases are:

UNIT Data Base - Contains personnel data on each unit of division size or greater, including number of men in each military occupational specialty (MOS); personnel casualties; logistics and hospital statistics; and attached and detached subordinate units for each day of the campaign.

UNIT INVENTORY Data Base - Contains information on total number and types of vehicles and weapons possessed by a unit on a daily basis and numbers of destroyed, damaged, and in-repair systems for the unit on a daily basis as well.

UNIT LOCATION Data Base - Contains a wide variety of information for each unit during each daily period, including parent unit, front line trace, unit movement, details of terrain occupied, and unit activity for the day.

AIR Data Base - Contains data on tactical air missions performed by air forces of both sides in the Ardennes battle area during the period.

T/O&E Data Base - Contains the authorized organizations for each type of major combat and service support unit that fought in the Ardennes Campaign.

WEAPONS Data Base - Contains detailed performance specifications on each weapon system used in the Ardennes Campaign.

REFERENCE Data Base - Allows the source(s) of information for each record in other data bases to be located for confirmation corroboration.

BIBLIOGRAPHY Data Base - Each record in this data base gives complete bibliographical information for sources used in researching the ACSDB and listed in the reference data base.

USING dBASE IV FUNCTIONS.

The ACSDB may be manipulated using standard dBASE IV commands from the dBASE IV dot prompt (see below for information on obtaining the dot prompt). By typing 'USE' and the name of the desired data base, one accesses the data base intended for manipulation. One may then list desired fields, perform mathematical calculations, etc.

The ACSDB data base files are designated as follows:

Unit Data Base	unitdata.dbf
Unit Inventory Data Base	inventor.dbf
Unit Location Data Base	unitloc.dbf
Air Data Base	air.dbf
T/O&E Data Base	toe.dbf
Weapons Data Base	wpns.dbf
Reference Data Base	referenc.dbf
Bibliography Data Base	bibliog.dbf
